v10.5

# Monitoring Your Networked Classroom – Visually and Audibly

Providing the latest IT infrastructure for your students is one thing but making sure it is used for the intended purpose is quite another!

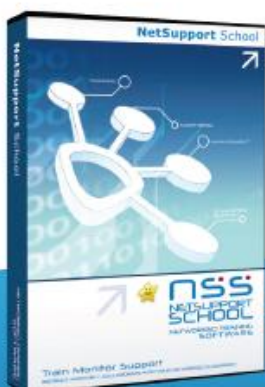

NetSupport School's unrivalled range of monitoring tools are consistently voted top of their class and for good reason. From a single view teachers can check in real-time the status of each PC and if student focus does appear to be lacking, a number of remedial actions are available.

Monitor and control internet and application usage, introduce lists of approved and restricted websites, intervene when students are making unauthorised use of Instant Messenger applications, assess topic understanding by tracking typed content and manage and control the use of printers.

And now in newly released NetSupport School version 10.5 you can even monitor and record audio output, select one of the displayed student thumbnails to instantly listen to the audio being played on that PC, monitor microphone usage, correct pronunciation, chat or simply engage with each student individually without disrupting the lesson.
